

# Use-Case Flow Specification

## Alumni Mentorship & Mock Interview Platform

|                           |                                                                                                                          |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Use Case ID</b>        | UC-04                                                                                                                    |
| <b>Use Case Name</b>      | Book Mentorship Session                                                                                                  |
| <b>Primary Actor</b>      | Student Mentee                                                                                                           |
| <b>Secondary Actor(s)</b> | Alumni Mentor, Notification System (included use case)                                                                   |
| <b>Trigger</b>            | Student Mentee selects a recommended mentor and an available time slot to request a mentorship / mock-interview session. |

### Preconditions

- Student Mentee is registered and logged in (UC-01: Register & Create Profile has completed successfully).
- At least one Alumni Mentor with a matching domain has published open availability slots (UC-03: Manage Availability).

### Postconditions

#### Success:

- A confirmed session record exists, linked to both the Student Mentee and Alumni Mentor calendars, with a meeting link generated. The booked slot is removed from the mentor's available slots.

#### Failure:

- No session record is created; the previously displayed slot remains unbooked and visible to other students.

### Main Success Scenario

1. Student Mentee navigates to “Search & Match Mentor” and views mentors recommended by domain (UC-02).
2. Student Mentee selects an Alumni Mentor and opens that mentor's availability calendar.
3. System displays open time slots for the next 14 days.
4. Student Mentee selects a slot and confirms the booking request.
5. System validates that the slot is still available (re-checks in real time to prevent race conditions).
6. System creates the session record, generates a meeting link, and reserves the slot.
7. System includes UC-07 (Send Confirmation Notification): a confirmation with meeting link and calendar invite is sent to both the Student Mentee and Alumni Mentor.
8. System displays a booking confirmation screen to the Student Mentee. Use case ends successfully.

### Alternate Flow — 5a. Slot No Longer Available

- 5a1. System detects the selected slot was booked by another student in the interim (race condition).
- 5a2. System displays a “Slot no longer available” message and refreshes the calendar with current open slots.
- 5a3. Student Mentee selects a different available slot and the flow resumes at step 4.
- 5a4. If the Student Mentee closes the dialog instead of re-selecting, the use case ends without a booking.

### Alternate Flow — 6a. Booking Failure (System Error)

- 6a1. Session record creation fails (e.g., calendar service timeout).
- 6a2. System rolls back the slot reservation so it remains bookable, and displays a retry option to the Student Mentee.
- 6a3. If retry also fails, the Student Mentee is advised to try again later and no session record is created.
